

Nestor Elihu Arriaga Gallegos

Renewable Natural Resources Engineer | Territory, GIS & Landscape

Aguascalientes / Texcoco, México | +52 (33) 3487 1084 | nestorarriaga.irnr@gmail.com | Mexican nationality
English B2 (First Certificate in English)

TARGET AREAS	Territorial & landscape planning GIS & remote sensing Restoration & NbS Water & watersheds Environmental assessment	
PROFESSIONAL PROFILE	Renewable Natural Resources Engineer, who completed academic requirements in June 2026 with degree issuance in progress, focused on territorial analysis, GIS and landscape planning. Experience in international research (Horizon Europe), environmental assessment, community ecological planning, and watershed, restoration, carbon and climate-adaptation projects. Combines biophysical, productive, social and institutional information using QGIS, Google Earth Engine, Python and R to build maps, territorial typologies, indicators and decision-ready technical products. Professional interests include territory, landscape, water, biodiversity, nature-based solutions and socio-environmental project design.	
VALUE PROPOSITION	Territory + landscape Multiscale diagnosis, rural proofing, ecological/landscape planning and socio-ecological systems analysis for territorial design and planning. Water + climate + restoration Watersheds, water stress, drought, floods, restoration, biodiversity, carbon and nature-based solutions.	GIS + environmental data QGIS, Google Earth Engine, remote sensing, raster/vector analysis, thematic cartography and spatial synthesis for decision-making. Science + communication Method and results systematization, reports, maps, infographics, and interdisciplinary work with public, private and academic stakeholders.
PROFESSIONAL & RESEARCH EXPERIENCE	2025	Research Internship · GRANULAR Project (Horizon Europe) CIHEAM-IAMM Montpellier, France - Conducted applied research on rural diversity, water stress and agricultural intensification in Comarca Lagunera, integrating environmental, productive, social and institutional variables. - Built territorial typologies through spatial analysis and clustering methods, and produced cartography and methodological synthesis for rural proofing and evidence-based planning. - Worked within an international multidisciplinary team, adapting European frameworks to the Mexican context and documenting reproducible results.
	04/2025 – 08/2025	Technical Collaborator · Environmental Management Instruments / Agropark Project Grupo INDERS - Integrated biophysical, territorial and regulatory information for Technical Justification Studies (ETJ) and Environmental Impact Assessments (MIA). - Supported site characterization, data organization, cartographic outputs and technical documentation for institutional decisions, private-sector clients and environmental authorities.
	2024 – 2025	Technical Assistant · Community Ecological Planning Universidad Autónoma Chapingo – SEMARNAT - Collected, cleaned and systematized environmental and social information for Community Ecological Planning processes in ejidos linked to the Tren Maya corridor. - Prepared cartographic and documentary inputs for community planning, territorial management and decision-making within environmental policy instruments.
	2023 – 2024	Applied Project · Landscape Planning in Southeastern Mexico Universidad Autónoma Chapingo – SEMARNAT - Collected, cleaned and analyzed territorial databases used in landscape planning and socio-environmental planning studies. - Integrated heterogeneous sources to support territorial diagnostics and the development of cartographic inputs.
EDUCATION	2021 – 2026	Engineering Degree in Renewable Natural Resources Universidad Autónoma Chapingo – Division of Soil Science Teaching and Research Completed academic requirements in June 2026; degree issuance in progress. Coursework and applied training in watershed management, water resources, restoration, biodiversity, territorial planning, GIS, environmental assessment and socio-ecological systems.

SELECTED PROJECTS & RESULTS	2026	Territorial monitoring system · Sierra Fría Protected Natural Area, Aguascalientes. Designed an indicator system for 106,263 ha and five analysis zones, integrating vegetation, moisture, surface water, wildfire risk, erosion and social pressure; processed 2010–2025 series in QGIS and Google Earth Engine.
	2026	Watershed diagnosis and management proposal. Integrated biophysical, productive and degradation data for a 21,210 ha watershed surveyed across Tlaxcala, Puebla, Veracruz and Oaxaca; produced maps of activities, degradation, priority management and monitoring.
	2024	Carbon program · Bacalar, Quintana Roo. Coordinated cartographic preparation for a feasibility and carbon-capture potential study, delineating analysis units for a nature-based climate solution.
	2025	Parque Hundido Sambulá, Mérida. Developed a socio–environmental proposal for a 1.14 ha urban space integrating infiltration, vegetation cover, urban heat mitigation, nature-based solutions and community participation.
	2024	Urban forestry · Universidad Autónoma Chapingo. Quantified urban-tree ecosystem services through field data and territorial analysis, and prepared communication inputs for measurable environmental benefits.
	2023	Greywater reuse in high-density buildings. Developed a technical urban water-reuse proposal connecting environmental engineering, water efficiency and water culture under academic supervision.
TECHNICAL & METHODOLOGICAL SKILLS	Territorial & landscape analysis Multiscale diagnosis, territorial typologies, rural proofing, ecological planning, and integration of environmental, social and productive variables.	GIS & remote sensing QGIS, Google Earth Engine, thematic cartography, NDVI/NDMI/NBR, hydrology, surface water, classification and spatial-pattern analysis.
	Data, modeling & biodiversity Python, R/RStudio, statistics, clustering, Vensim, AnyLogic, MaxEnt and Marxan; data cleaning, visualization and reproducible workflows.	Assessment & technical communication ETJ, MIA, reports, cartographic synthesis, indicators, Adobe Creative Cloud, and translation of evidence for technical and non-specialist audiences.
TOOLS & SOFTWARE	— QGIS, Google Earth Engine, Python, R/RStudio and Microsoft Excel.	— Adobe Illustrator, InDesign and Photoshop for visual communication.
	— MaxEnt, Marxan, Vensim and AnyLogic for applied modeling and analysis.	— AutoCAD, Rhino3D and Blender for spatial representation and documentation.
	— Gephi, NetworkX and VOSviewer for network and knowledge mapping.	— LaTeX and Microsoft Office for scientific and technical documentation.
LANGUAGES	Spanish: native. English: B2 / upper-intermediate, First Certificate in English (FCE); able to read technical documentation and communicate professionally.	
SELECTED ADDITIONAL TRAINING	— Integrated Water Resources Management · UNU-INWEH 2026	— Forest and Landscape Restoration + Monitoring · FAO 2026
	— Big Data Analysis for Water Related Applications · UNU-INWEH 2026	— IPBES and IPCC: Bridging Science, Policy and Practice · RESPIN / Learning for Nature 2025–2026
	— Spatiotemporal Drought Assessment with Google Earth Engine · UNU-INWEH / UNESCAP 2026	— Biodiversity Finance · BIOFIN / UNDP / GEF 2025–2026
	— Surface Water/Flood Mapping with Satellite Data · UNU-INWEH / UNESCAP 2026	— Introduction to Computational Geointelligence · CentroGeo / MéxicoX 2024
	— Remote Sensing of Wildfire Management · UNU-INWEH 2026	— Computational Hydrology of Watersheds · Purdue University / edX 2024
COMMUNICATION, REPRESENTATION & MULTI-STAKEHOLDER WORK	2026	Interdisciplinary editorial project · UACH. Coordinated content in a seven-person team; prepared interviews, context briefs and syntheses on water, territory, rurality and environment.
	2026	International University Entrepreneurship Congress · Panama. Presented an applied project to an international academic and professional audience.
	—	Student University Council Representative · DEIS, UACH. Represented the student community in institutional discussions and communication with university authorities.
	—	Forum on the future of Mexican agriculture. Participated in an academic dialogue with Dr. Julio Berdegué on youth, territory, rural development and public agro-territorial policy.
